

VISTO

Acrylic spatula putty

White water-based acrylic putty for interior and exterior use. It has excellent resistance to adverse weather conditions, damp, alkalinity and is suitable for tiling and coating of plaster, concrete, aerated concrete, plasterboard and cementboard. It has excellent working properties, dries fast without cracking and it is easy to sand giving a smooth surface.

Advantages:

- Indoor and outdoor use
- Excellent adhesion
- Great coverage
- Easy and fast to use with perfect final texture
- Resistance to moisture and frost

PRODUCT FEATURES

TECHNICAL CHARACTERISTICS

Grading

Max 90 µm

Specific gravity of wet mortar

1100 Kg/m³

COLOURS

White

COVERAGE

1 kg/m² for 1 mm layer thickness depending on the substrate

MIXING RATIO

Approximately 2,5 parts of powder to 1 part of water

PACKAGING

| EN 998-1 White acrylic putty for indoor/outdoor use | |
| Category type | GP/CSII |
| Reaction to fire | Class A1 |
| Water absorption | W ₀ |
| Water vapour diffusion coef | μ=5/20 |
| Adhesion | > 0.6 N/mm ² (FPb) |
| Thermal conductivity | λ _{10,dry} = 0.27 W/MK (tab. mean value; P= 50%) |
| Durability (against freeze /thaw in the place of use) | Evaluated as excellent, after laboratory and field tests |
| Dangerous substances | NPD |

CONSTRUCTION APPLICATIONS - PUTTIES

APPLICATION

APPLICATION FIELD

for the perfect smoothing of surfaces such as plaster, concrete, plasterboard and aerated concrete, in interior or exterior areas.

PREPARATION

Surfaces must be clean and dry, free of oil and dust.

Porous surfaces like aerated concrete must be dampened with water or be primed with VITEX 100% Acrylic Water-based Primer.

STEPS

1

In a clean bucket, mix the amount you need in a ratio of 2,5 parts powder to 1 part water, with constant stirring until a homogeneous mixture without lumps is created. Leave the mixture for 5-10 minutes and mix again. Ready mixture has a pot life of 2-3 hours.

2

Use a spatula, trowel or airless spray gun. Plastering must be done in two successive layers that are about 4-5 hours apart from each other and in a total layer thickness that is recommended not to exceed 4mm.

3

The final layer is sanded after about 7-8 hours with a sandpaper. The surface must dry well, be cleaned and should be primed before the painting with the appropriate primer.

TIPS

- Application at 5-35°C and <80% RH. For exterior use, do not apply if there is a risk of rain/frost in the next 48 hours.
- Do not apply the putty in a thickness

exceeding 2 mm, because this may cause cracks.

- Tools must be cleaned immediately after use with water and if needed, with soapy

water or detergent.

- Do not dispose of liquid waste into ground water table. Unused paint requires special handling for safe disposal.

ADDITIONAL INFORMATION

STORAGE

5°C-38°C

Should be stored in a dry place, on a wooden surface (pallet) maximum 12 months from production date.

PRECAUTIONS

Please read carefully the labelling mentioned on the can before use. For detailed instructions on hazards and safety in use the Safety Data Sheet is available upon request. Poisons Control Centre Tel. : +30 210 7793 777
